PROFESSIONAL SUMMARY

AWS Cloud Engineer with 3+ years of professional experience in cloud infrastructure, DevOps practices, and full-stack application development. Hands-on experience designing, deploying, and managing AWS environments using EC2, S3, RDS, IAM, VPC, Route 53, CloudWatch, Lambda, API Gateway, and DynamoDB. Skilled in containerizing applications with Docker and Docker Compose, automating infrastructure using Terraform and AWS CloudFormation, and deploying production applications on AWS. Strong background in Node.js, React.js, PHP, MySQL, and MongoDB, enabling end-to-end application development and cloud deployment. Experienced in Linux administration, CI/CD with Jenkins, cloud migration, serverless architectures, and implementing AWS security best practices while working in Agile development environments.

TECHNICAL SKILLS

AWS: EC2, S3, RDS, IAM, VPC, Route 53, CloudFront, CloudWatch, CloudTrail, Auto Scaling Groups, Elastic Load Balancer (ELB), Cost Explorer
Networking: VPC, Public/Private Subnets, Security Groups, Network ACLs, Internet Gateway, Route 53 (DNS & Failover Routing), Elastic Load Balancer
IAM & Security: IAM Policies & Roles, Security Groups, Network ACLs, Cloud Security Best Practices
Containers: Docker, Kubernetes
Infrastructure as Code: Terraform, AWS CloudFormation
CI/CD: Jenkins, Git, GitHub, GitLab
Monitoring & Observability: Amazon CloudWatch, AWS CloudTrail, Custom Dashboards & Alerting
Linux: Linux Administration, Shell Scripting, Process Automation
Databases: MySQL, MongoDB, Amazon RDS, Microsoft SQL Server
Programming Languages: JavaScript (ES6+), PHP
Frameworks & Web Technologies: React.js, Node.js, Express.js, CodeIgniter 4, Bootstrap 5, HTML5, CSS3
Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

Careermantra | Pune, India

Jul 2023 - Jan 2026

Full Stack Developer & Cloud Engineer

- Led migration of the CareerMantra production website from shared hosting to AWS Cloud, configuring EC2, S3, RDS, IAM, and CloudWatch to improve scalability and reliability.
- Built a custom CRM platform for lead management with role-based access across Admin, Sales, Marketing, and Campaign teams.
- Integrated Mailchimp and Neodove CRM systems to automate lead capture and email marketing workflows.
- Configured CloudWatch monitoring dashboards and S3 lifecycle policies to improve operational visibility and control storage costs.

Unisky Technologies | Pune, India

May 2023 - Jun 2025

Software Engineer - Cloud & DevOps

- Supported migration of enterprise eCommerce infrastructure from on-premises servers to AWS Cloud.
- Designed cloud architecture using AWS EC2, RDS, S3, IAM, and core AWS networking services.
- Automated infrastructure provisioning with Terraform and AWS CloudFormation, building reusable Terraform modules to standardize deployments.
- Configured Auto Scaling Groups and Elastic Load Balancers to improve application availability and scalability.
- Implemented IAM policies, Security Groups, VPC networking, and Network ACLs aligned with cloud security best practices, and built CloudWatch monitoring dashboards and alerts to support AWS cost optimization initiatives.
- Deployed production-grade MERN stack applications on AWS infrastructure designed for high availability, supported by Jenkins CI/CD pipelines and automated Linux-based backup scripts.

- Developed a full-stack Doctor Appointment Booking System using React.js, Node.js, Express.js, and MongoDB.
- Implemented JWT-based authentication and authorization to secure REST API endpoints, and designed MongoDB schemas and APIs for appointment scheduling, patient management, and doctor availability.
- Built and maintained reusable React.js UI components, improving frontend performance and user experience.
- Participated in Agile/Scrum ceremonies, including sprint planning, daily stand-ups, code reviews, and stakeholder demos; resolved defects using GitLab workflows.

- Built responsive websites using HTML5, CSS3, Bootstrap, and JavaScript.
- Implemented UI enhancements and content management features based on client requirements.
- Performed website maintenance and cross-browser compatibility testing

KEY PROJECTS

Dockerized Node.js CRUD Application with MySQL

Technologies: Node.js, Express.js, MySQL 8.4, Docker, Docker Compose, Docker Volume, Docker Network, Thunder Client, Git, GitHub

- Developed a containerized CRUD application using Node.js, Express.js, and MySQL 8.4 with RESTful APIs for Create, Read, Update, and Delete operations.
- Used Docker Compose to orchestrate separate Node.js and MySQL containers with isolated networking for secure container-to-container communication.
- Configured Docker Volumes to provide persistent MySQL storage, ensuring database data remained intact across container recreation and updates.
- Built a reusable Docker-based development environment with environment variables, automated service startup, and API validation using Thunder Client.

Serverless Student Management System

Technologies: AWS Lambda, API Gateway, DynamoDB, Amazon S3, Node.js, IAM

- Developed a fully serverless CRUD web application using AWS Lambda, API Gateway, DynamoDB, Amazon S3, and Node.js without managing any servers.
- Implemented REST APIs with AWS Lambda functions integrated through API Gateway and used DynamoDB for scalable NoSQL data storage.
- Hosted the frontend on Amazon S3 and secured backend resources using IAM roles and policies following AWS security best practices.
- Demonstrated event-driven serverless architecture with automatic scalability, high availability, and pay-per-use infrastructure.

AWS Multi-Region Disaster Recovery Architecture using Route 53 Failover Routing

Technologies: AWS EC2, Application Load Balancer (ALB), Amazon Route 53, Route 53 Health Checks, Route 53 Failover Routing, Amazon EBS, Amazon Machine Image (AMI), VPC, Security Groups, Internet Gateway, Public Subnets

- Designed and implemented a Multi-Region Disaster Recovery architecture across Mumbai (ap-south-1) as the primary region and North Virginia (us-east-1) as the secondary region to ensure high availability and business continuity.
- Configured Amazon Route 53 Failover Routing Policy with Health Checks to automatically redirect application traffic to the secondary region during primary region failures.
- Provisioned EC2 instances behind Application Load Balancers (ALBs) in both AWS Regions and standardized deployments using Amazon Machine Images (AMIs) and Amazon EBS volumes.
- Built secure networking using Amazon VPC, Public Subnets, Internet Gateway, and Security Groups, demonstrating disaster recovery planning, fault tolerance, and resilient cloud architecture using AWS native services.

Production Deployment of MERN Stack Application on AWS Cloud

Technologies: AWS EC2, Ubuntu, Nginx, PM2, MongoDB, React.js, Node.js, Express.js, SSL, GitHub

- Deployed a production-ready MERN Stack application on AWS EC2 using Ubuntu Linux with React frontend and Node.js backend.
- Configured Nginx as a reverse proxy, managed backend services using PM2, and secured the application using SSL certificates.
- Managed Linux server administration, application deployment, firewall configuration, environment variables, and process monitoring.
- Implemented deployment best practices including Git-based code updates, service restart automation, and production troubleshooting.

CERTIFICATIONS

- AWS Academy Graduate – AWS Academy Cloud Foundations
- Microsoft Technology Associate (MTA) – SQL Database Fundamentals
- UI Development Certification
- AWS Certified Solutions Architect – Associate (SAA-C03) | Exam Preparation in Progress

EDUCATION

Master of Computer Application (MCA) <i>Institute of Industrial Computer Management and Research ,Pune</i>	2019 – 2022
Bachelor of Computer Application (BCA) <i>Indira College of Commerce and Science, Pune</i>	2015 – 2018
